

## High-Grade Color Offset Paper of Xinya Paper Group Started Operation Successfully

On March 5<sup>th</sup>, the 3150 mm paper machine of Xinya Paper Group started the operation successfully. Originally, the paper machine produced ordinary culture paper, using mixed straw and wood pulp as the raw material. With the market demand shift toward higher quality, the original products produced can no longer meet the requirements. In order to further enhance its market competitiveness and seek differential development, Xinya Paper formulated an improvement plan for the paper machine, using 100% wood pulp as the raw material to produce high-grade color offset

paper and yellow Dowling paper.

On March 9<sup>th</sup>, the paper machine successfully produced the first reel of color offset paper, which is a further improvement over the high-grade offset paper that uses 100% wood pulp as the raw material. The color offset paper produced has high stiffness, improved formation, and purer color and can be used mainly in the high grade stationery, publications and printing areas. 🚩
